

ABSTRACT OF THE DISCLOSURE

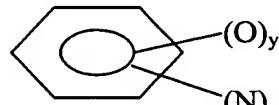

Alkoxylated compounds of formula I

wherein each AO group is independently an alkyleneoxy group selected
5 from ethyleneoxy, 1,2-propyleneoxy, 1,2-butyleneoxy, and styryleneoxy
groups; n is an integer of from 2 to 100; m is an integer of from 1 to the
total number of -OH plus -NH hydrogens in the R group prior to
alkoxylation; the sum of m plus p equals the number of -OH plus -NH
hydrogens in the R group prior to alkoxylation; and the R group is a group
10 selected from the following:

15 Y^- is an anion, preferably an inorganic anion such as a halogen anion,
a hydrogen sulfate anion, one-half of a sulfate anion, or one-third of a
phosphate ion;

25 (X) , where y is an integer of from 0 to 3, z is an integer
of from 0 to 3, provided that the sum of y plus z is 2 or 3;

and their use as anti-misting agents.
